Hussain Khalil

EXPERIENCE / web development / web design / backend design

SUMMARY /

A dedicated and focused developer and designer, who completes tasks efficiently and requires little supervision, capable of completing large tasks while adhering to deadlines and delivering results when expected. Dedicated to providing performance and high-quality results. Organized, energetic, professional.

WEB DEVELOPMENT /

- Worked to develop a number of websites, incorporating user interaction, including searches, registration and log-ins, administrating websites and creating solutions meant to be efficient, easy to use and intuitive.

- Worked with tools, including using distributed version control systems to track project files and collaborate with other developers.

- Designed varieties of systems used for a wide range of clients, from individual to industrial needs.

- Experience with modern software, including Node.js and PHP to develop robust software.

- Experience with working with deadlines to encourage transparency and input from clients.

WEB DESIGN /

- Use of product visualization tools to prepare designs for high-quality and well-designed websites.

- Use of graphic design software to develop iconography and resources that are consistent, pleasing and intuitive.
- Implementation of motion and animations in order to design easy to follow interfaces.
- Development of interfaces that responsively scale from desktop to mobile devices to be portable and convenient.
- Integration of optimizations to increase performance of usability of applications.

BACKEND DESIGN /

- Experience with powerful backend solutions and frameworks such as Nodejs, PHP, Rails and web.py.
- Development of advanced and efficient backend systems and APIs to create robust, usable solutions.
- Performance-capable and scalable backend designed to be easily used to cater to a wide-range of clients' needs.
- Development of APIs that are easy to interact with and easy to comprehend and utilize.
